

鸡粪干燥设备

- ⊕ 一般情况下，鸡粪处理设备主要利用鸡舍内的空气或室外空气干燥禽粪，在48小时内，将80%的含水量降至20%以下，大大提高了禽粪使用价值和经济价值。
- ⊕ 工作原理：
鸡粪处理设备，湿鸡粪由鸡粪输送带进入匀料装置，均匀平铺到多孔干燥板上。鸡舍排出的空气穿过湿粪层带走水分从而干燥鸡粪。

MANURE DRYING EQUIPMENT

- ⊕ In general, manure processing equipment mainly dry the poultry excrement through the air in the chicken house or outdoor air which can reduce the water content of excrement from 80% to less than 20% in result of improving the use value and economic value of poultry manure significantly.
- ⊕ Operating principle
Manure conveyor delivers the wet manure to the uniform device which will lay the wet manure on the multihole drying plate evenly. The air from the chicken house across the wet manure layer and bring away the moisture so as to achieve drying manure.
